Biochemistry/Molecular Biology (BCMB) is an interdisciplinary major aiming at an in-depth understanding of living systems at the molecular level. Students in the BCMB major learn about cell structure, its characteristics from a biological and biochemical perspective, and its intricate and complex functions through which basic life processes are governed. To this end, the curricular structure for this major includes courses from various disciplines in the Natural Sciences, including Biology, Chemistry, Mathematics and Physics. In addition to the standard coursework, the BCMB curriculum emphasizes the importance of a research experience through which the students are exposed to the state-of-the-art techniques used by researchers in this field. The major also prepares undergraduate students interested in pursuing interdisciplinary graduate programs, such as genetic engineering, genomics, proteomics and bioinformatics.

  One semester course credit for work done either:
  a) during one summer (at least 8 weeks full-time work) at Hendrix or an off-campus summer research experience such as work under an REU program. All off-campus research projects must be pre-approved by the Program Chair.
  b) two semesters work at Hendrix.
